

AIDEAL Evidence-backed agent readiness

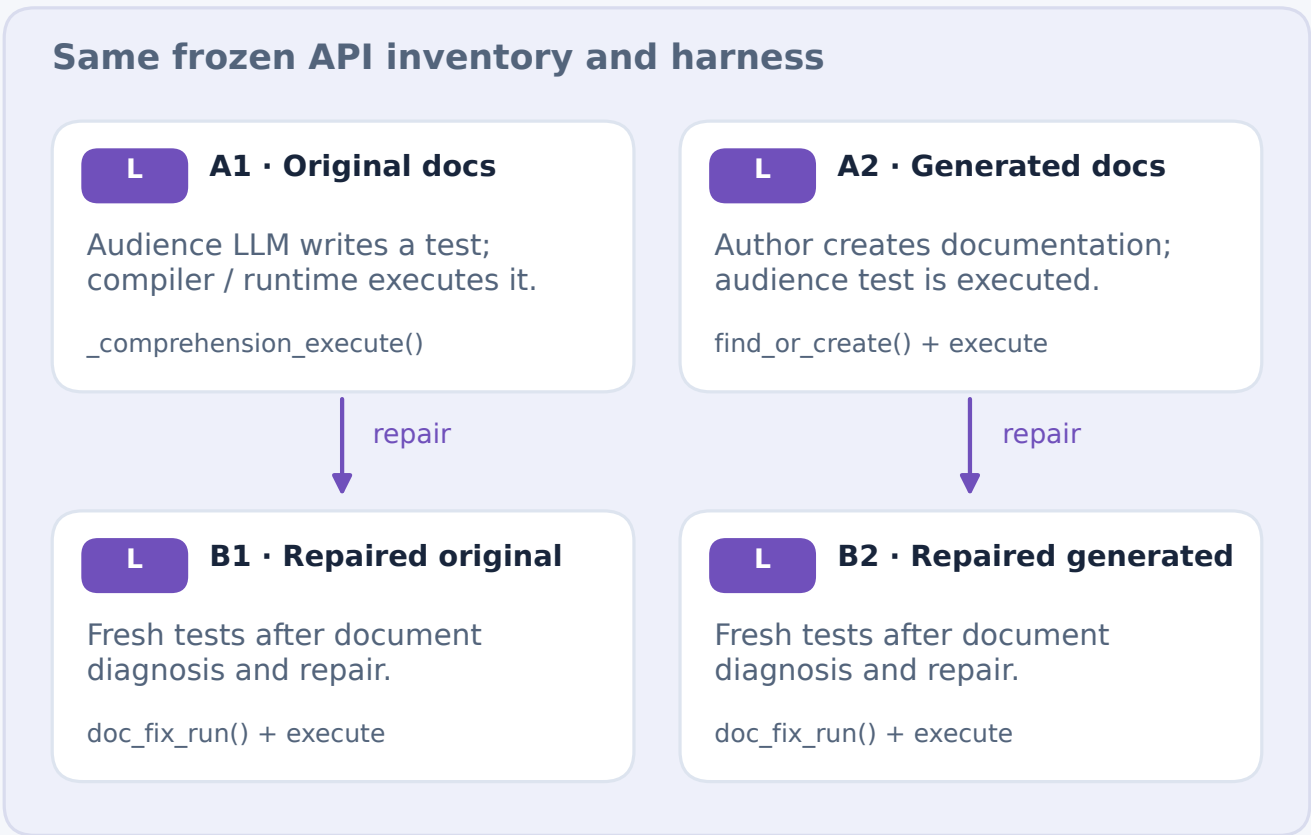

Measure API use → explain barriers → review improvements → re-evaluate

- D** Deterministic automation
- L** LLM generation / diagnosis
- H** Human decision
- O** Operator agent + tools

01 FREEZE THE EXPERIMENT

02 MEASURE THE DOCUMENTATION TREATMENTS

03 INTERPRET THE EVIDENCE

D Autonomous operations Watchdogs • compatible checkpoints • separate mutable outputs • provider-start coordination

Zero code-fix rounds in final cells. Document repair: up to 5 rounds, with a 2-stuck-round stop.

04 HUMAN-REVIEWED IMPROVEMENT LOOP

What is implemented

Executable API study + evidence reporting + review records. Approval does not launch an agent or merge changes.

What still needs separate validation

Input / oracle correctness • independent discovery and setup • held-out workflows • full transport-level quota admission
